OS Windows 7

Its taken a while for the issue to crop up. It tends to happen when I play for a long period ie more than 1 hour.

Attached is a screenshot. Th first task manager shows how much the memory drops when I end the game.exe process.

The 2nd task manager shows normal utilisation with a fresh new game.exe running. The memory then gradually increases over time.

Whats the time period on those screen shots (IE, how many minutes/hours does it take to reproduce it).
