Thank you for your negative comment. XWIS is a very simple TCP/IP IRC-ish (not really irc protocol) service. FDS can run easily and its not that hard to understand.

Open wireshark.

tcp.port == 4003 open fds and boom you have everything the fds needs to run.

tcp.port == 4005 for the server list

Have a nice day douchebag.

Quote:That thing is called "servserv".

HOF

Yeah I saw that in the WOLAPI.dll hex servserv.westwood.com;4005 but didn't exactly know that it was called servserv.
