My game has been crashing every 5 minutes of getting in any server. Everything works fine until the crash. It says I lose connection and get the gameplay pending. So it might have been a 4.0 problem that randomly occured. That or my system is just infected only for renegade

So i uninstalled everything and after I reinstall renegade it wont allow me to open it and I get this message

The procedure entry point
?Detect_Bandwidth @@YAKKKHAAHAAKKPAUtBandtestSettingsStruct@@@Zcould not be located in the dynamic link library BandTest.dll.

Any help would be great and the quicker the better cause I need to play soon or I might have to kill someone in real life lol
