Installing Renegade:

1. Insert your Renegade CD or The First Decade into your computer.
2. Click through the installer and optionally change the install directory, shortcut y/n etc.

Updating Renegade:

1. Download the latest TT CLIENT patch (as of writing 4.0 beta4):
<http://www.tiberiantechologies.org/downloads>
2. Run the downloaded file after completion.
3. It should automatically detect the installation folder of Renegade. If it does not, use 'Browse' to navigate to the folder you installed it to.
4. Click next and select the language you want your Renegade to be in.
5. Choose where you want to have the shortcuts placed.
6. Click install.

ADDITIONAL INFO: The patch will download the required files depending on your Renegade version and will update it to the latest official patch (1.037) automatically if required.

Frequently Asked Questions (FAQ)

Do I need to install Core Patches?

- No

Do I need to install any of the official patches?

- No

Do I need to install any of the previous scripts.dll?

- No

Do I need to install Renegade Resurrection?

- No

Do I need to install RenGuard?

- No

Something went wrong while following these steps. What now?

- Reply to this sticky and write down the step that is causing you problems (if possible) and we'll try to help as soon as possible.

I encountered a problem. What now?

- If you have a problem with Renegade, create a topic here:

http://www.renegadeforums.com/index.php?t=thread&frm_id=7&rid=23454

- If you have a problem with the TT patch, create a topic here:

http://www.renegadeforums.com/index.php?t=thread&frm_id=52&rid=23454

If the problem is a crash, ZIP and include the crashdumps. These are located in:

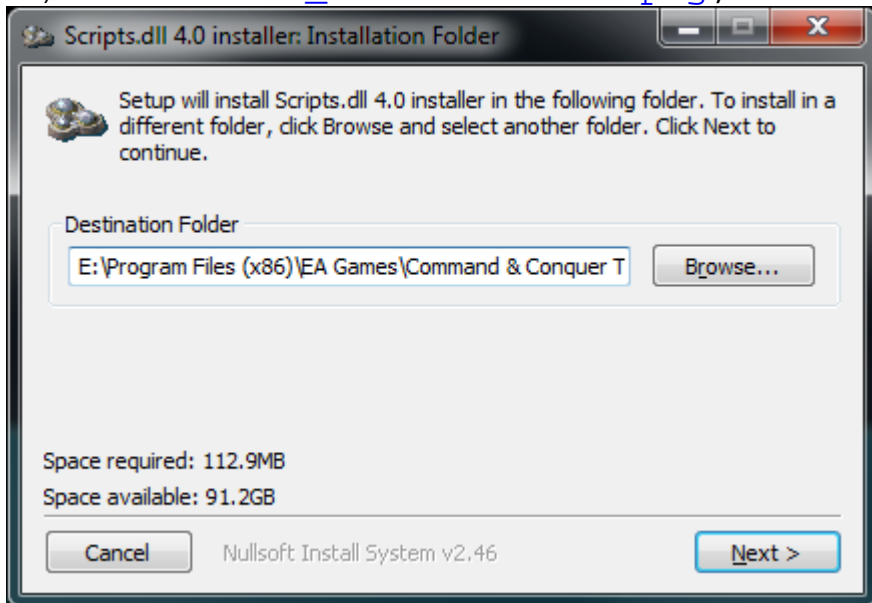

My Documents/Renegade/Client/Debug

Now if you would please make this a Sticky, I'd say installation instructions are up-to-date. Also, if anyone has something to add or something is missing, please tell.

I wrote these instructions and tested them on a regular Renegade CD installation (pre-1.037) and The First Decade (1.037).
