This plugin patches the FDS so that when it tries to do a WOL ban it'll send the allow command instead. It also includes a patch that will remove the kicking of players that are idle on the WOL team selection screen for a few minutes. If you want a version without the patch to remove this kicking, contact me. This plugin should fix WOL banning ("You are banned from this channel") when a player stays too long on the team selection screen (or gets kicked from it multiple times).

To install place 'WOLBanRemover.dll' in the root FDS folder and add an entry for it under [Plugins] in ssgm.ini.

You can contact me on renforums.com under the nick 'iRANian'.
