```
luatt.lua:  
function InputConsole(...)  
    Console_Input(string.format(unpack(arg)))  
end
```

At the top of your script put:  
dofile("LuaPlugins/LuaTT/LuaTT.lua")

Not sure, but Console\_Input for luatt probably doesn't format the string for you, so either do that first, then put the formatted string into Console\_Input, or include luatt as suggested, then use InputConsole()

Also, use msgsp if the client's scripts support it, the blue of page is pretty awful to read on a lot of maps, and a nice green message or whatever stands out more than dark blue.
