Hi, I recently bought a new Optical Gaming Mouse, the Gigabyte M6900. I have my free-aim function assigned on the right click and sometimes it gets stuck (I have to tap right click again to take of free-aim) and soemtimes it doesn't even work at all. My mouse works perfectly find for other games like BF3 etc but just Renegade.

I've also noticed my renegade loading screen have changed ever since i got this new mouse. On the load screen i used to be able to see the loading bar, now i can't, it seems like my monitor is too small (even thought its 24inch) and that the image is too big, so the loading bar is cut off at the bottom. I've tried reinstalling renegade several times and updated mouse drivers etc. Nothing worked

Does anyone know why? I really want to play renegade but its really annoying and frustrating as i free-aim alot

Thx, regards,

William
