Animoskity wrote on Fri, 13 July 2012 19:22I'll just keep this thread as a place to keep my own personal crashdumps.

Here's one I got just recently.

Let me know how to fix it asap. I'm running like 19 plugins which i'm sure 1 or more are causing my server to crash somewhat frequently.

Edit: Crap, I just realized I put this in the mod release forum... I apologize, please move it.

1. not the right forum.
2. no one is at your beck and call, So I'm really guessing you wont get no help, saying tell me how to fix it asap.
3. you need to go through your list of plugins and add them 1 by 1 until the server does crash, if it doesn't then you ruled that out.
4. If it does crash then ask the maker of that plugin to update it.
