I have investigated this and it seems like right now there is a limit in altmat.exe where it requires you to pass the full path to all 3 w3d files (e.g. c:\blah) for it to work. If the full path contains spaces (e.g. c:\program files\blah) then you need to enclose the full path in quotes.

I know the right fix but we (TT) need to figure out how best to get the fix out there.
