It may not be a service pack issue, I loaded renegade straight after the initial install of XP Pro, no service packs or updates installed. I had the same problem where it crashed out when loading up the installer, it ended up being a faulty stick of RAM causing my problem, but I'd try the alternate installer supplied by Sk8rimuk, that managed to get renegade installed even with my faulty RAM, but it died later and gave me version mismatches whenever I tried to go online.
