---

I am currently running Renegade just fine using my Voodoo3 2000 and DX 8. I had to get a third party driver from <http://www.voodooextreme.com>, but it works just fine.

I usually get 20 to 40 fps during normal gameplay, but if there are a lot of explosions, then my fps drop to 2-4. I generally get lower fps (15-35) on glacier, especially in the tunnels. And yes, I know I am not lagging, I just have a video card that can't handle glacier very well.

I would check out the above website if you want to run the Voodoo5500. I am sure it can work, but it may just be easier to go and get a new card.
