- 1. Download the attached file(Hash.bat) and place it in your Server folder.
- 2. Create a sub-folder called "hash" in the Server folder. Any files you want to add to the anti-cheat will be placed in this folder.
- 3. Run Hash.bat, which will add the hashes of all files in the hash folder to anticheat.ini.
- 4. Remove the files from the hash folder.
