I had a wireless mouse a while back that had to download drivers before it worked, but windows update always takes care of that the second you plug it in nowadays it seems.

(Pre Join) If you go into the Ren config menu, where is the mouse sensitivity slider, and are the keyboard key controls listed properly?

(Both) Can you change key bindings before you join a game, can you change key bindings during game? (assuming esc brings the options menu up still).

(In Game) Do you have another mouse and keyboard you could try plugging in in their place?

When was the last time you restarted your computer?
