2006 has finally ARRIVED. After the long wait, and TONS of bugs. We will be releasing TODAY, May 31, 2013.

Now, keep in mind this is a public beta, which of course means things may be missing, mis-textured, and some features just will not make sense at all or are incomplete. Some elements you may have seen from video or pictures taken from internal builds may be absent for stability or gameplay reasons.

But, also keep in mind that with our new launcher (Thanks to Dan Paul) we can make patches and quick fixes in next to no time at all. We are all very excited about this and can't wait to see you all in game

Don't forget to report any bugs you find on our bugtracker.
