My shit didn't randomly get deleted I was told that I need to back it up and I did then it was reformatted. Your provider gives you some of the worst vps's for the price I have seen. Have fun running just one game server on your vps. Maybe you need to do more research before renting such crap. http://www.solarvps.com/windows-vps/#launch-windows - This is a million times better then your provider. I can name a lot more vps providers that destroy yours.
