```
if (Get_Object_Type(damager) == Get_Object_Type(obj))  
{  
    if (damage > 0.0f)  
    {  
        Commands->Apply_Damage(obj, damage,"Explosive",damager);  
    }  
}
```

Something like this would apply the damage of the shooter to the turret if the team were the same. This way you can team the turret to GDI but still damage it but it would still only attack Nod.

Just an idea :/
