a small low resource program that is placed on your desktop to hold shortcuts to anything on your pc.

Just drag an icon from a folder to the dock and you have yourself a neat desktop.....edit icons,target folders ,colors and schemes.

<http://www.dockicons.com/>

d-load the yzdock and the icon pack and your good to go...any.png can also be used as an icon...what i did was just give the bio_neon.tga an alpha channel and then save to .png,thern i had myself a new icon.

I also made that Souseek icon if anyone wants it.
