We don't get any 3.4.4 as we not only run only custom maps but also have a custom package that is loaded on everymap with its own objects.ddb, with addititional presets. Without this extra package which 3.4.4 players cant use they will just crash on load. As far as I know, only one major server even let's people join without scripts and even according to their estimates over 95% of their population is running 4.1.

I can confirm that objects.DDB exported with 4.2 do in fact cause major issues with vehicles on 4.1 servers. I ran into this a few days ago. I made a dummy 4.1 install and pointed my registry to it to fix this.
