Hello...I am playing on a macbook...unfortunately I am too dudduh on getting TT installed since I cannot run/install [.exe] files, I am using Portingkit and its crashing when I try and make a custom wrapper guess that part of it is busted, I was lucky to figure out how to get Renegade to even to work...but YAY me I did it!

But I can't join most servers that are listed in xwis yet due to needing TT I suppose... is there a manual install someplace?
