I don't have the android source with me right now, but I attached the prototype I built before the Android app. The protoype was thrown together really quickly & sloppily, so don't expect it to follow good Java practices or standards . It basically just contacts the replacement GameSpy Arcade master server (master-gsa.renlist.n00b.hk / renmaster.cncirc.net) and gets the servers from there. I also attached the GameSpy protocol spec, but be warned that some things might not work according to the spec.

Lone0001 wrote on Thu, 18 August 2016 19:35Well you could always play the critically acclaimed hit game Renegade 2 at work to tie you over until you get home to play Renegade.
Hahaha! that's amazing!

thanks man! if you can however, send the android source, id love that too or more or less the network functionality of it
