LE consistently crashes on windows 10 and 8 when trying to open the Level Settings menu. The issue is related to the visual styles of Windows, which you could disable in the compability tab on Windows 8, but this option has been removed on Windows 10. This means, afaik, that you're forced to run the program on a Windows 7 or lower virutal machine if you want to enable stuff like flying vehicles on a map, which is quite a hassle...

Is there any solution to this, without having to run a virtual machine?
