I would like to thank Jerad2142 for his contributions to 4.5 Update 1 (If I missed anyone else who contributed to 4.5 Update 1, sorry)

The main purpose of this release is to get a build out there built by our new build server so that we can debug any crashdumps that may show up (since we have the debug symbols for this new build)
The only other change is some scripts updates from Jerad that are low enough risk to be included.

4.5 Update 1 will download over the patcher automatically.
People wanting a full installer, a server download or a tools download can find them on the Tiberian Technologies website (www.tiberiantechnologies.org) in the downloads section.
The scripts source for this version (as well as a diff file from 4.5 to 4.5 Update 1) can also be found on that page.

Note that the full installer will install 4.5 only, not 4.5 Update 1 (it will then download 4.5 Update 1 automatically). It wasn't worth the effort to build a new full installer just for a minor update)

Anyone using DA can keep using the 4.5 build that is out there (but with the new 4.5 Update 1 bandtest.dll etc) as nothing has changed that would break DA. If for some reason you need both DA and the Jerad scripts changes, you can apply the scripts 4.5 Update 1 diff file from the download on top of the DA source tree and rebuild DA to get the changes (or ask on here and someone who knows how to do that will probably be able to help).

EDIT:
I would also like to thank Jerad for hosting the new scripts build server and for providing help with getting it set up etc.
