rackz wrote on Fri, 19 January 2024 14:31 All my posts need to be accepted :p

The first post of a user needs to be approved by a moderator (for the moment that would be me :p) before it is displayed. This is an anti spam bot measure.

ExEric3 wrote on Wed, 17 January 2024 21:35 smileys from menu doesnt works - arent displayed in a post like a bottom also cursor move before them in a editor

:stern: :nod:

For smileys: I managed to understand the problem. It adds a space before and after the smiley. When you insert two smileys, it has two spaces between them. And then it will not show correctly. I managed to change this behavior in the "all smilies" list by removing the space before the smiley and keeping it after the smiley so whenever you add multiple smilies, there will never be more than one space between them. But I did not manage to change it for the smiley shortcuts because it is hard written in the php code. I did try to correct this code (on development version) but I think it's included in multiple places and sadly i did not manage to find them all. As this little problem is not really a big problem, I'm not going to put more effort into it. I did report it to the people maintaining the forum software, though.

How switch from that quick reply editor to full without previewing message? I think it wasnt enabled/implemented on old forums.

I disabled the quick reply. It was not enabled on the old renforums so I guess we do not need it now either.

Goztow wrote on Wed, 17 January 2024 20:53- color problems while quoting fixed

BAGUETTE wrote on Fri, 19 January 2024 15:11 There is a problem with webpages being cached.

I cannot reproduce this on firefox or edge

ExEric3 wrote on Fri, 19 January 2024 20:35 Emails going to spam folder no-reply @

@blazer needs to fix this, reported to him
