I made all of these appart from krillin, which i got from a friend called psionic design - who i hate now.

The story of that model - He asked me for an alien model, so I asked psionic design for one of his, i had no idea he stole it, and i said to psyco army that I made it, then i figured out psionc design diddnt make it (although he diddnt tell me that he did make it) so then I get the blame... I really should have said I made it, so i would get the blame.

I do make my own models on most occasions, on my new mod i have models which are made from the public and sent to me, also models made by me. I am currently working on solid snake (again, as i lost the first model cauz i deleted the .3ds and my gmax version of it corrupted).

Please dont think I steal models, and if you knew how to mod Quake 3 arena, you would realise that the character models from that are in some funny shape (i have modded it somewhat in previous history). I am now on Reneade Starwars mod (which you can definitely not steal models for!!) and my mod which i am on - which is from the public which got sent to me, and myself.

Im trying to forget about the incident with the alien thingy model. Also that bid for power mod, the models dont look similar at all :/
