General HavocBah! I missed a few 000's off in my calculation. You should always measure bandwidth in bits not bytes, it avoids a lot of confusion.

So what id 3.5 Terabytes in bits?

But that's not what the topic of this thread is, it's "what do you download at...", and you don't measure your download speed in bits.

Just multiply 3,500,000,000,000 by 8 and you have the number of bits.

$(3,500,000,000,000 * 8 = 28,000,000,000,000)$
