fl00d3dFor anyone interested in the release date of Renguard:

A few lines of code will do the trick, actually...

```
int main()
{

x=1
WHILE (x>=1)
    {
    IF (current_date == release_date)
        {
        printf("Release date has been delayed, again");
        release_date++;
        }
    ELSE
        {
        printf("\nStill waiting...");
        x=0;
    }

return(0);
}
```

You didn't even bother to declare current_date or release_date, which means that it won't even compile, let alone actually run.. Then you omitted the semicolon after the int x declaration.. aside from that, you're missing at least one closing bracket somewhere.. not sure if you figured you didn't need to close the else{} statement, or if you just left the while{} statement open or what... Does anyone know if you're even ALLOWED to use a capital WHILE, IF and ELSE? who knows...

Good job, oh self proclaimed worthier than renguard team person...

Hell, I can't even code in C, and I knew that the second I saw it..

just stick with the whining.. you're better at that, thanks.
