I am having a problem. I got a new hard drive and I got it to the point where everything works perfectly, all my programs and games are installed and I am back to normal.

The problem is when I go to install the Renegade tools I double click on the "RenegadeToolsInstaler2.exe" and a message pops up saying it is initializing the installation... But that quickly disappears before I can read it and my computer does nothing. I have tried a bunch of things with the same results.

Then I upgraded Windows XP to be up to date, and the problem persists.

Help!?

edit:

Damn it! I tried to install another thing and it wont start. So it is not just Renegade!!!!

edit:

Ok, I got Renegade tools to install by putting it on my slave drive and installing, but the other program still wont install.
And because this thread has nothing to do with Renegade anymore, I ask that it is closed or removed. Thank you.
