Nodbuggera while tow system not the just the rocket ways over 200 pounds it takes more than one person to use and cannot be held and shot. It either needs to be mounted or on a tri pod or quad pod.

And a stinger will not damage a tank, no matter how much you say it will it wont. and even if it did one person cannot carry enough ammo for it to do that. Even in cnc. What are you gonna give the guy 50 missiles?

like i said if your gonna totally screw up real weapons be creative and make your own. its not like you using the red alert weapons any way.

<http://forum.americasarmy.com/viewtopic.php?t=8969&start=0>

and go here. Scroll down a bit. and read.

LOL, of course when you twist things so that they better your argument, you can make anything sound ridiculous. Notice how you said a stinger missile? (Singular, not plural) Way to twist the argument there. Of course ONE missile won't take out a tank! What we've been saying is that missileS can take out a tank. (note the usage of the plural rather than the singular)

Heck if you wanted to, you could use those 'high explosive' bottle rockets on a steel armor, and with enough of them, you could take out a tank. Completely destroy? Of course not. Take it out of commission? Sure.
