thanks, i tried that, and when i used the boolean tool, or whatever its alled, it deleted the box also, i just wanted the part of the mountain, and the endof the box gone, so i could have a tunnel in the mountain. Now i have a big mountain with a little hole, but in the hole is the whole mountain. I mean you walk in the tunnel, and there is really no edge untill you get to the end of the tunnel. Please help me
