Well, every time I try to install Renegade at exactly 15% compelet it stops and a few seconds later a message pops up saying "Renegade Setup Error: A file system error has been detected, please ensure that the Renegade Game CD-ROM is in the drive" I'v tried taking the cd out and putting it back in and hitting the "retry" button, I'v tried hitting the "retry" button over and over, I'v surfed the web high and low looking for some kind of help. I just got the game... the cd is spotless but it just wont install I need help
