General Havoclt's like telling your boss to f*** off, EA already owned Westwood before Renegade was released. It was a sub-company like Maxis is now and like Bullfrog was (yup EA closed them down before they could release DK 3 - which they had started work on). EA are turning into a monopoly like Microsoft is and there is little anyone can do about it, thats why new companies find it hard to get started off in the industry, unless you are a developer then your not likely to survive unless you do something big. In my opinion EA would have closed down Maxis if it wasn't for The Sims being so sucessfull.and u never told ur boss to fuck off?
