Running a server on Linux automatically requires to have Botmode=LFDS.

Same with win32. Added this option because users forgot to set the right config option.

You're saying that you want to admin a win32 server from linux?

touroloucoHi,

Unfortiunately I had to move the FDS server to W2K to support Scripts/Reborn.

I tried to install Brenbot on one of my linux machines, because somethings weird happends with the win32 version. (CPU load rocketing, clients dropping etc.. and errors like: DBD::SQLite::st execute failed: near "=": syntax error at modules.pm line 740.)

But when I state in the config that the target server is WIN32, it calls me a n00b..

"BotMode = WIN32 and running Linux? Eh. No. n00b."

I think it's the other way around..

Can this option be implemented correctly?

Cheers
