The Image Gallery is now 110% back online. I had made huge changes in the way the images are stored and retrieved which has vastly improved efficiency and speed of the Image Gallery, and the site as a whole. Today I finished the last fixes including bitmap thumbnail creation and image embedding using the old image.fetch.php URL. These weren't working before, but now they are.

If you find ANY bugs with the Image Gallery, please let me know ASAP. Thanks!
