SEALnpsmith82

The ram limit for my athlon XP motherboard is 1GB.

I'm planning to get two 512mb chips.

Im not positive, but i think you cant do that. If the limit is 1 gb, you cant go over it at all...correct me if im wrong please.

By buying two 512mb chips = 1GB.

We're talking about maximum speeds of said memory, not overall memory quantity limits in a motherboard.
