I was wondering when you see the server ping times on the WOL listing does everyone see the same values ?

The reason I ask is that when I am hosting (dedicated). I usually get a ping in the top five (sorting by lowest ping).

However I don't always get the lowest ping, hence the pings can't be the actual pings from my desktop to the server, since my game is the other side of a switch and all the other servers are somewhere on the net.

So how does WW actually calculate the ping values?

When do these values get updated?

Thanks,  
Gib
