zunnieYour posting on the wrong forum for that, goto the renevo forums and ask there, its Dante (Blaze Regulator) thats connected with that file.

http://www.renevo.com/forum/

[zunnie]

whatever,
points moot.
i will just use expect. If i had to guess, the problem the br.net and the 24 hour flush is prolly related to fdstalk anway. If not, why doesnt brenbot use it?

anyway, no biggy, I would rather do it myself and know whats going on.

thanks anyway
