If you think this document was strictly for saying "it's NEVER the host's fault" then you didn't read it all.

Yes, sometimes it IS the host's fault... this is to help you determine when that's the case. Because MOST of the time it's NOT the host's fault.

Really read the part about KBPS lag... I notice a LOT of people in my servers who aren't pulling enough KBPS and subsequently bitch about lag.
