I would be VERY greatfull if I could use it.

My server is a 24-player modded Capture The Flag server. I use vloktboys script along with my own modifications to make it very fun to play.

The server runs on a 2MB line with no lag.

The server computers specs are:

2.4 GHZ P4
512MB DDR Memory
Windows 2000 Professional

Again, I would really appreciate this serial.
