About a week ago I bought a box full with games known as the C&C Combat pack. So Installed it all. I first tried to start Red Alert 2 and Tibsun. That went great. Then I tried to start Renegade. Everything went great and all, but when I tried to start the game it said that it couldn't find the cd. (I had entered disc 1 at that time) I tried to enter disc 2 and that seemed to help. Everything went great and I forgot about this little incident. But after completing all the singleplayermissions I tried to start with multiplayer using gamespy arcade. All went wall. Installed the arcade correctly, installed the latest patch correctly. All went wall, until I tried to host or join a game. Every time it says that the cd authentacy failed and please quit.

I tried it several times with disc 1 and 2 and with several servers. It all didnt help. Do you know a solution for this problem? How can I start multiplayer?

oh yes

system specs:

Windows XP
