If you didn't catch the part in the Microsoft document, then here's how you get the URLs to work again.

How to disable the new default behavior for handling user information in HTTP or HTTPS URLs  
To disable the new default behavior in Windows Explorer and Internet Explorer, create iexplore.exe and explorer.exe DWORD values in one of the following registry keys and set their value data to 0.

For all users of the program, set the value in the following registry key:

HKEY\_LOCAL\_MACHINE\Software\Microsoft\Internet  
Explorer\Main\FeatureControl\FEATURE\_HTTP\_USERNAME\_PASSWORD\_DISABLE

For the current user of the program only, set the value in the following registry key:

HKEY\_CURRENT\_USER\Software\Microsoft\Internet  
Explorer\Main\FeatureControl\FEATURE\_HTTP\_USERNAME\_PASSWORD\_DISABLE
