Nice boxes.
Me, I have only one computer.
Intel motherboard of some kind (dont know what model)
Intel Pentium 4 CPU 2.40GHz (runs everything I throw at it)
512mb RAM
40gb hard disk (although now that I have a broadband connection and I am downloading so much crap, mabie I need more disk space... Or mabie I just need more blank CDs to burn whatever crap I dont need right now onto
NVIDIA GeForce4 MX 440
LiteOn 32x12x40x CD recorder (I haver no need for a DVD driver, if I wanted one for watching video DVDs, I would buy a proper DVD player and there arent that many data DVDs that arent also available on CD)
1.44 mb floppy (although its broken last I checked unfortunatly)
Standard keyboard (the kind with the Windows Keys on it)
Microsoft USB IntelliMouse Optical (Mice are about the only thing Microsoft makes thats good)
OzStick single arcade stick (for all the retro arcade games, it may also help with my Tony Hawk Pro Skater scores
Logitech MOMO Racing Force Feedback Wheel (that I still havent bothered to take out of the box and play with yet
17 Inch CRT (I wouldnt mind a 17 Inch LCD but they are still so expensive that its not worth it)
on-motherboard 10/100 LAN connection for connecting to LANs (e.g. at LAN parties)
802.11b Wireless LAN connection to connect to our AP (which then connects to the 512k DSL connection)
TV tuner card (currently non-working) that lets you watch TV on your PC
Creative Vibra 128 Sound Card
a set of DKL speakers + subwoofer.

/me wonders if he can count his MD-981 MIDI keyboard as a "computer item"... (well it does plug into the computer...
