I'm releasing the web tool soo, but in the mean time, use this to edit your brenbot.dat in windows servers:

<http://renmaps.neronhosting.com/sqlite.zip>

Load up the database, go to manage, hit query and you can see stuff in the database. it allows you to remove records and stuff. If you know sql language you can some cool things, however, seeing as sqlite is not a relational database a lot of usefull stuff like joins e.t.c. don't work.
