I just picked up a Scorpio case for a computer fair. They had it on display and it looked great, I case considering it includes a 420W PSU (2 fans), 3 case fans and front audio/usb/firewire.

I plugged it in, without any components hooked up and you can barely hear it with all 5 fans running. The Blue LED fan on the side looks cool. I was thinking of going for the silver version but the black looks much better.
