Subject: Those pesky harvesters refuse to follow waypoints

---

I just finished a map in four days, and everything works perfectly EXCEPT the harvesters. I added waypoints the exact same way many tutorials have said, and no matter what I do, the harvesters just refuse to follow them onto the main harvester waypoint and into the tiberium. When they create in the beginning, they follow the vehicle creation waypoint, but not the harvester one that starts at the end of the creation one. It is seriously annoying and I can't get any where. Can anybody please help me?
