People still use Voodoo cards? I've got a Voodoo 3000 PCI that I use to use in my old P233 years ago. It won't work with 2000 or XP so it's pratically useless now.

I remember ages ago when nVIDIA (I think it was) said you could trade in your old card for one of their Quadro cards I think. The ones with that funny purple bloke on the front of the box.
