Lol btw, i cancelled my Cable connection a few weeks ago because it major sucked ass with speeds jumping all over.

I kept my adsl connection 4mbit/1mbit, but now i have a BIG problem with that too.

Whenever im in renegade, then after a few minutes my adsl just stops working. I have to reset my pc (normal restrat dont even work) to get it back, redial etc. and then it works again for a few minutes.

This ONLY happens when im in renegade. It NEVER happened when im OUTSIDE renegade, is someone fucking me or something?
