Hi there,

We've been using Brenbot lately because BR.Net just isnt stable.

Ive setup 3 servers on my win2k3 server box under server.ini. I have the primary humpy92, and then the slaves humpy92 and 93...The primary is a AoW, the second and third are mod servers.

When i config brenbot for humpy92, it works PERFECT. When i make a new copy of brenbot for humpy93 and humpy94....The commands dont work in IRC, and nothing shows up. It seems like its only reading the first part of the server.ini and not the rest of the servers..Same goes for BR.Net

Is it possible to do this? Can anyone shed some light?
