Hm.. that sucks dude.

What firewall are you using? Stupid question lol, u said Zonealarm ;P[/edit] I cant imagine that your ISP prevents you from connecting to WOL. If you have ZoneAlarm, then check the programs in the settings.

Delete the programs related to renegade ie: game.exe , game2.exe and renegade.exe from the list and then restart your Firewall.

Now, you go back to the Programs tab and you are gonna Re-Add game.exe, game2.exe and renegade.exe to this list and you grant it all rights to access the internet, lan and you also grant it server-rights.

I hope this will fix your problem dude, and, if you run Zonealarm 24/7 anyway you may just want to shutdown the Windows internal firewall (w2k and above)
