TMSnipRIt Works!

1 thing - every other program i have will work fine on D drive, how come RenGuard wont? It is the same file type etc settings as C

Hmm... this reminds me of a problem i had earlier with the FDS.

Some months ago already i was uninstalling the FDS from the C-drive to reinstall it on the E-drive. During the FDS setup i DID enter E:\Westwood\FDS but somehow this stupid program KEPT insatlling it in my OLD dir that i used on the C-Drive.

After six reinstalls i went into the registry to delete the

HKEY\_LOCAL\_MACHINE\Software\Westwood\RenegadeFDS key from there.

And what the hell!!!! It worked, now it DID install to the right location.

Maybe you shouldve deleted the old Renegade key from the registry which is not done automatically during uninstall :S
