ummm , what the hell is compatibility mode and why are we having so many problems with this program. I play renegade for at least 10 hrs a day but now i cant play nothing.This aint cool and i suggest you guys get your crap right b4 people like me get annoyed and move on to another game, especially since you need this program to play on most servers.Not putting down rengaurd(concept is great, compatibilty sucks) but this needs to be addressed seeing that i paid for my game and i damm well want to play it.When i cant play i have to listen to my wifes mouth, so you see my anger and concern.
